

Bell Tree Branch Cover

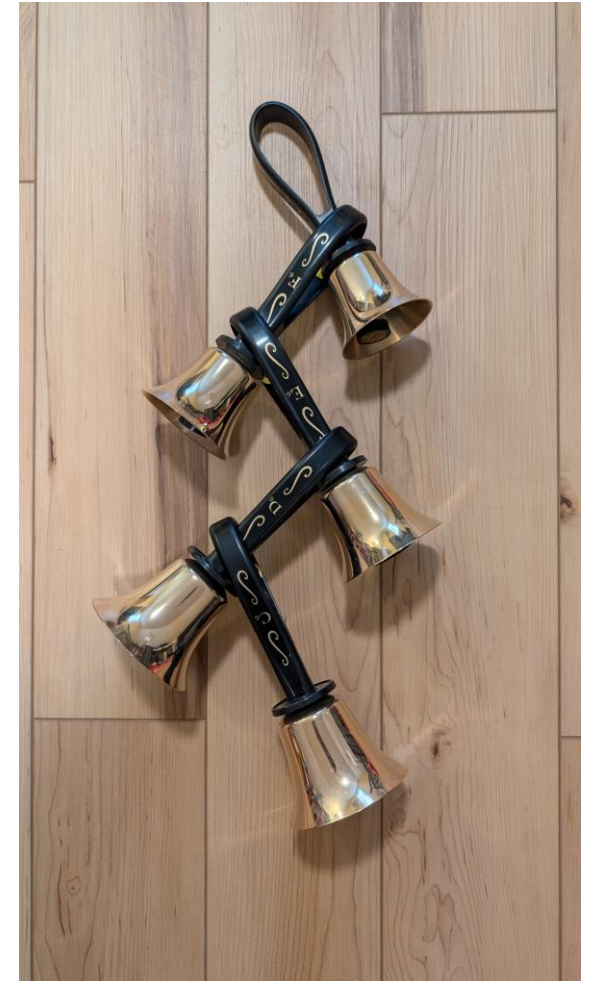

You will need thick material (fleece works great) and a sewing machine for 2 straight seams.

Cut a piece of fleece about 58 inches long and 12 inches wide.

This example is for a small treble tree C6 – G6.

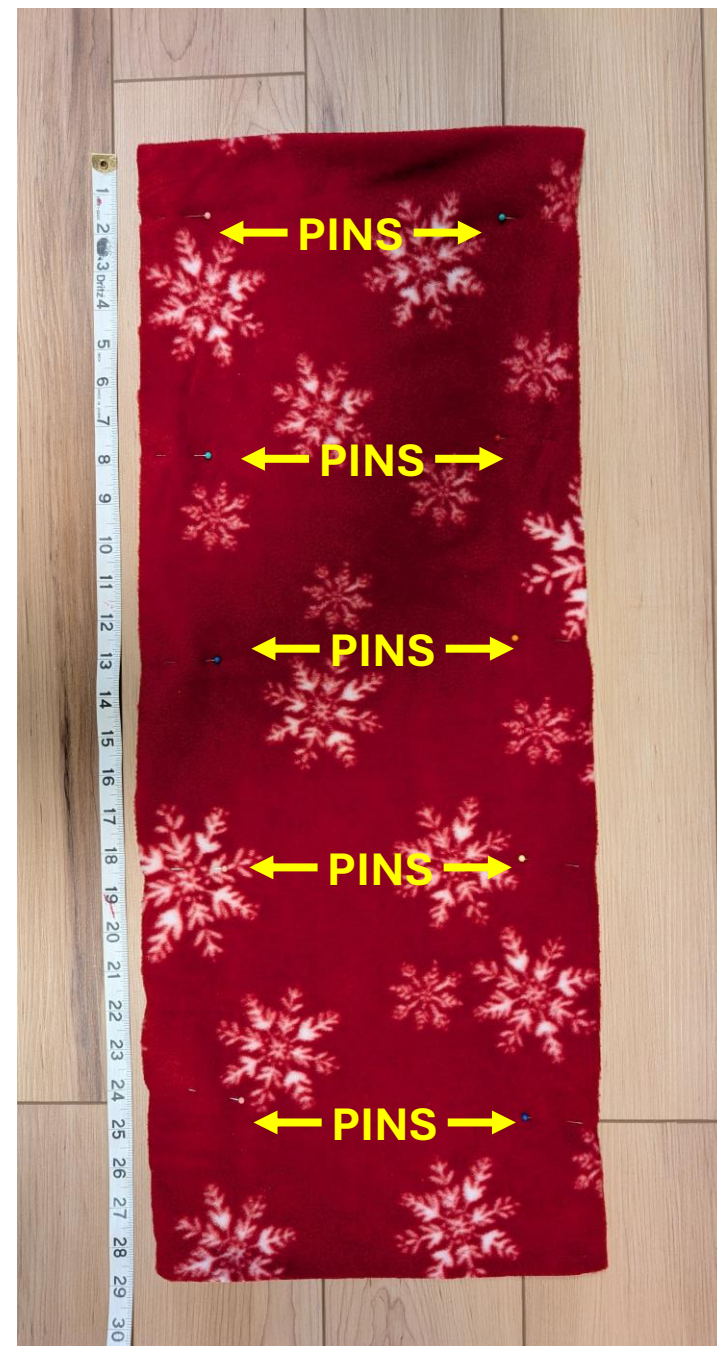

FOLD

Fold fleece in half
so the fold is along
the short edge.

Next, pin long
sides together.

Sew two straight seams along each of the long sides. The bottom short side opposite the fold will be open.

Turn inside out so the seams are on the inside.

Finally, cut a small notch at the top on the fold.

Slide the bell tree through your cover with the top bell handle sticking out through the notch.

Any extra length makes great padding.

Make one for any size bell tree branch!
